

BAISHALII®

A name that justifies TRUST

Aiming the 5th Generation

Baishali Steels Private Limited, the pioneer in Eastern India was set up in the heart of West Bengal which is located 25 km away from the city of Kolkata. The company started with the production of stainless-steel kitchen sink on 6 th October, 2006 and increased its product line to P.V.C Cistern, Water Storage Tanks, Chromium Plated Bathroom Fittings, P.T.M.T Bathroom Fittings, Dustbin and Household Drums.

The logo "A name that justifies trust" not only describes the superior attributes that enhances our products but also the emotional and loyal relationship which we want to build with our end customers.

TANKS

ROTO & BLOW MOULDED Water Storage Tanks

Baishali Water Storage Tanks in all shapes, sizes and configuration and used variety of purposes accross the domestic and industrial fields. Water Storage Tanks are in integral part of household water systems. These Tanks are usually equipped with UV inhibitors, preventing sunlight from facilitating algae and bacterial growth within the tank. Thermal expansion tanks prevent water hot and provide instanneous access to water are used across variety of applications where needs to be stored for instanneous flow of household water, storage, commercially, agriculture & irrigation, fire suppression and industrial uses.

Instalation process are simple, require pipe & fittings - need to make sure the connecting pipe no leakage and easy flow of water to tank and make sure to check valve allow water to prevent in from flowing back.

Fit it... Forget it...

Simple technicalities of a Cistern - after a toilet flushed, the water feed come through the fill valve, the float rises to it's set level, the water stop rising and the cistern is filled and ready for the next flush the toilet. In the same way, when you flush the toilet, the handle pulls the flush valve and lift it up. There is a rubber seal at the bottoms of the flush valve i.e. syphon base and when the valve is activated (rubber seal lift up) and forces water out of the cistern into the toilet bowl.

The main & major system mechanism works smoothly depending the component and that the quality of the each accesories - whose are better and that the area "BAISHALI" is secure and assure their products as such better than the available in the market.

It is recomended to avoid - using harsh chemicals, acid, bleach. They can damage rubber seals/gaskets and causing spileage of water.

Life Long GOLD

PTMT Series :

PTMT - Polytetra Methylene Terephthalate plastic material was launched in India in the last decade, and since then, it has grown into the most preferred material for plastic taps and sanitary materials.

PVC is a type of plastic that contains chlorine, while PTMT is a polyester-based thermoplastic. The composition of PTMT makes it more resistant to heat and chemicals compared to PVC.

One of the primary advantages of PTMT taps is their exceptional durability. They are resistant to corrosion, rust, and wear, making them a long-lasting choice for your bathroom fittings.
